

Super Market Sales

Dataset:

- Usually contains the raw data imported or entered manually.
- Could include customer records, sales transactions, product details, dates, locations, etc

Search Bar:

- Often used to create a user-friendly search interface.
- May contain data validation, drop-downs, or form controls (e.g., slicers) for filtering other sheets.

Analysis:

- Likely includes processed or transformed data (e.g., cleaned, grouped, aggregated).
- May involve formulas like SUMIFS, VLOOKUP, INDEX/MATCH.
- Could be split into different metrics such as totals, averages, or comparisons over time.

Dashboard:

- A visual presentation of key metrics using charts (bar, line, pie), conditional formatting.
- Usually dynamic, changing based on filters or slicers.

Pivot

- A sheet filled with Pivot Tables based on the Dataset.
- Helps in summarizing large volumes of data quickly (e.g., total sales per region/product).
- Can feed into the Dashboard or Summary.
